

IN THE ABSTRACT:

Please amend the abstract as follows:

An energy ~~Energy~~ generating system using sea waves comprises characterised in
~~that said~~ a floating body (1) is mounted on a structure, (5), ~~in that it~~ The structure
includes at last one horizontal shaft [[(9)]] integral by its ends to the structure and said
~~structure (5), and in that said~~ means for converting the movement of the said floating
body [[(1)]] into mechanical energy, including include a moving housing [[(10)]] around
which the connecting cable or chain [[(4)]] winds, ~~with said~~ The housing (10) being is
mounted in rotating fashion in relation to ~~said~~ a horizontal shaft [[(9),]] in such a way that
it rotates under the action of ~~said~~ the wound cable or chain, (4). ~~The system obtains~~
~~energy in a very simple and effective way.~~
